

The Tanzania Carnivore Atlas

Why do we need the Carnivore Atlas?

Tanzania is home to at least 35 carnivore species, half of Africa's carnivore species, including six which are globally threatened:

Wild Dog, African Lion, Striped Hyena, Spotted Necked Otter, Cheetah and Spotted Hyena.

But we need information on the distribution and status of all carnivores in Tanzania.

How can you help?

We need data from you. Please tell us about the carnivores you see in Tanzania and fill in our species check-lists.

Objectives of the Carnivore Atlas

- 🐾 To generate information on the status of carnivores across Tanzania.
- 🐾 Develop an Action Plan for Carnivore Conservation in Tanzania.

Why should we monitor carnivores?

- 🐾 They are in global decline and need protection.
- 🐾 They attract foreign currency through tourism.
- 🐾 They regulate population of prey species.
