

Give Lake Naivasha a Future!

Right now, it has no future:

1. People take out more water than nature can put in
2. Excessive nutrients from homes and agriculture seep into the lake
3. Gone is the papyrus that filtered sediments
4. Gone are forest catchments that caught and released water
5. The lake is full of invasive animals and plants
6. The damaged ecosystem can no longer provide services like clean water and fish

Each One of Us Can Take Action to Save Lake Naivasha!

1. Encourage conservation of the lake as it is in the best interest of horticulture, tourism and all
2. Implement the Environmental Management and Co-Ordination Act
3. Join and support local environmental groups
4. Work together to limit water use, agrochemical use, land clearing and developments at the water's edge
